The Power of Sharing Resources

- Does your school or district plan to expand your language programs, but not the human resources to have an instructor assigned at each school for every language and level?
- Do you have a College Level Program being administered at your high school? Could you benefit from having the ability to share resources with your affiliate?
- Do you have an adult community language program at one location but more students than that facility can accommodate?
- Do you have a partnership with an educational institution in another part of the world?

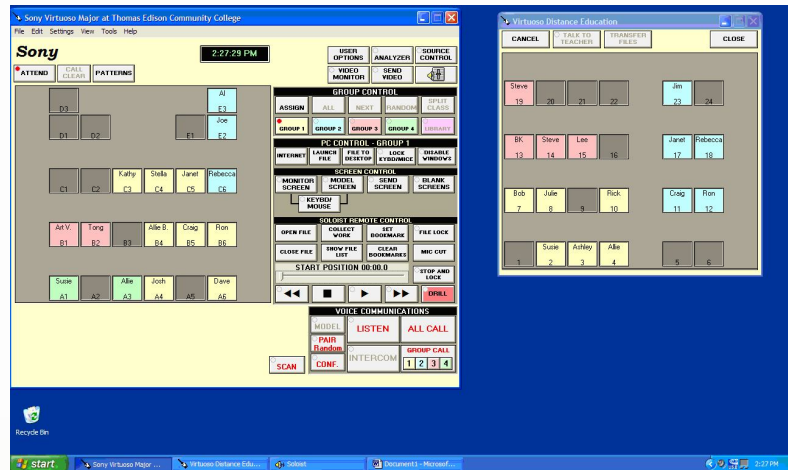

If you answered "yes" to any of these questions, the Sony Virtuoso Major DE software module could help you offer more and share resources across the street, across the school district, across the world.

Sony Virtuoso™ Major DE Distance Education Software Plug-In Module

Sony Virtuoso DE is the latest addition to the Sony Virtuoso Software suite enabling an instructor at one physical location to conduct a class in their Sony Virtuoso digital language lab as well as connecting to, controlling, and interacting with students in a Sony Virtuoso lab at a separate location.

Instructor's control panel and view of the local and remote classroom

Interactivity and Class Management is Easy

- When two rooms equipped with Sony Virtuoso Major DE software, all of the functions performed with either Virtuoso instructor control software is immediately reflected/effected on the other.
- The instructor can verbally interact with all students as well as with individual students, pairs, or groups of students at either location.
- The ability to work with everyone using Group Control, Screen Control and Soloist Remote Control functions makes it easy to manage both classrooms simultaneously.
- An optional camera may be installed so that the remote students are able to see the instructor.
- Network bandwidth utilization is maximized with bi-directional use of TCP/IP Unicast and UDP Multicast protocols across a single SANSSplex™ TCP/IP connection.
